Slide 15

Driving Change Beyond Projects

This document outlines the significant contributions, influence, and recognition achieved in the realm of driving change beyond traditional project frameworks, particularly focusing on the applications of AI and machine learning. It highlights the efforts made to establish best practices, advocate for ethical technology use, and the acknowledgment received as a thought leader within the organization.
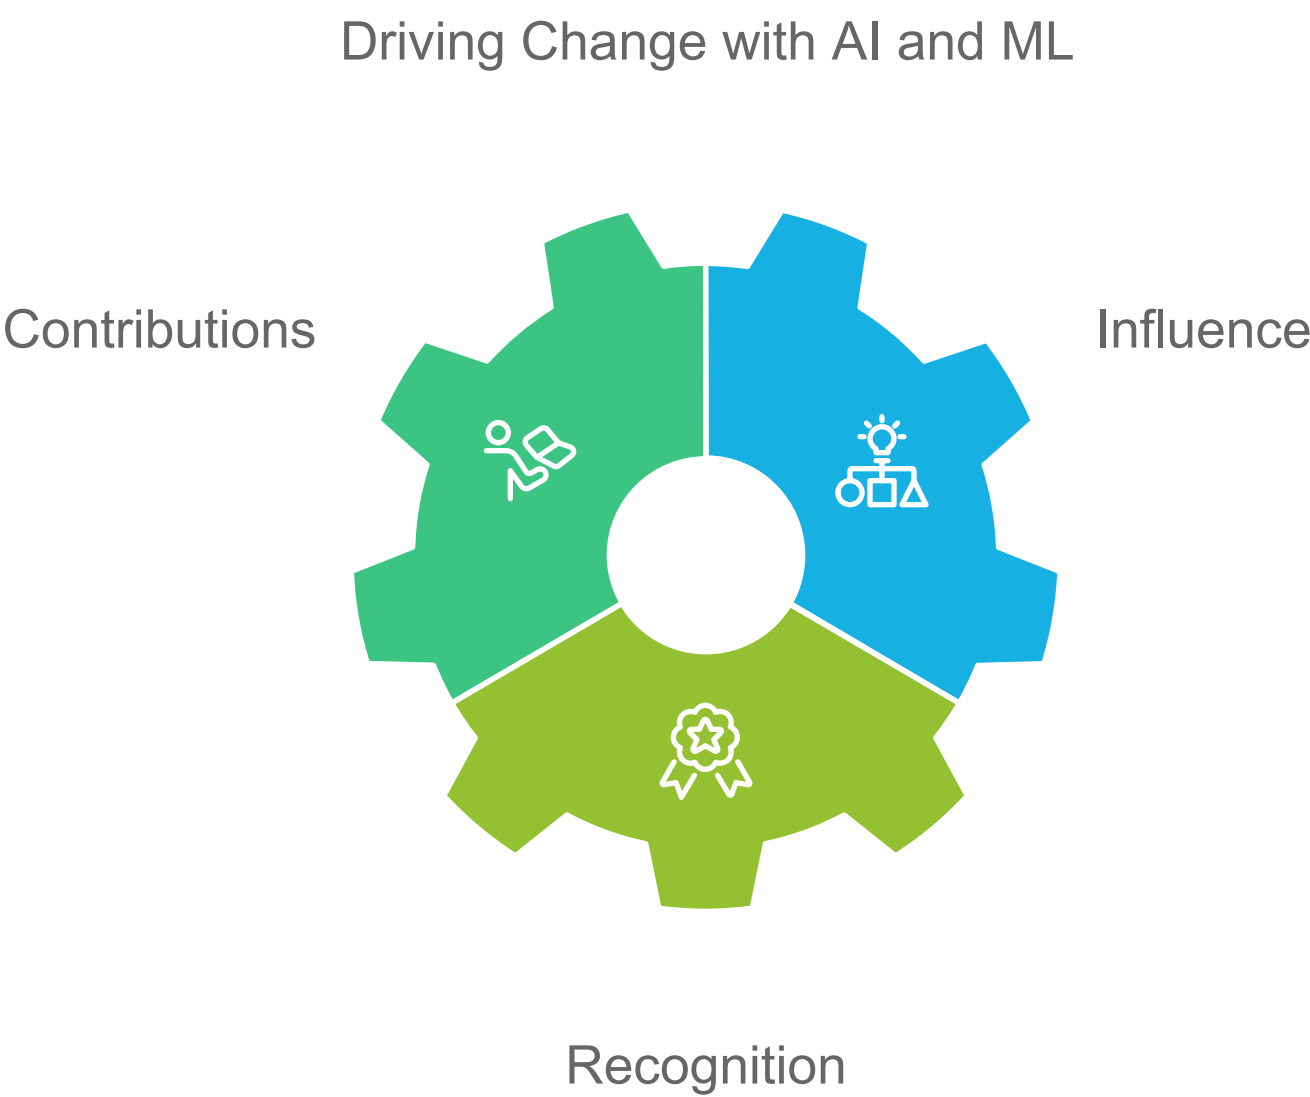

Contributions

- **Published Articles**: Authored several articles that delve into the applications of AI and machine learning, providing insights and guidance on how these technologies can be effectively utilized in various sectors.
- **Presentations**: Delivered presentations at both internal forums and industry conferences, sharing knowledge and fostering discussions on the latest trends and innovations in AI and machine learning.

Influence

- **Best Practices**: Played a pivotal role in establishing best practices that have been adopted across UnitedHealth Group (UHG), ensuring that teams are equipped with the necessary frameworks to implement AI and machine learning effectively.

- **Advocacy for Ethical AI**: Actively advocated for the ethical use of AI and responsible technology practices, emphasizing the importance of transparency, fairness, and accountability in technology deployment.

Recognition

- **Thought Leadership**: Recognized as a thought leader within the organization, contributing to the strategic direction of AI initiatives and influencing the broader conversation on technology's role in healthcare and beyond.

Driving Change with AI and ML

Contributions   Influence

Recognition

This document serves as a testament to the ongoing efforts to drive meaningful change through innovative technology applications, ethical considerations, and a commitment to excellence within the organization.
